EXECUTIVE SUMMARY

The Average Payment Period of the second quarter decreases again and reaches 91.48 days; it is the best figure recorded since the second quarter of 2014.

The Average Payment Period decreases by 0.48 days with respect to the previous quarter and by 3.37 days compared with the same period last year.

The positive evolution of the Average Payment Period since last year results from the decrease of the Average Payment Delay, which decreases by 3.39 days while the Average Agreed Period increases by 0.03 days.

During the last quarter, the Average Payment Delay represents 13.47 days, thereby falling for the first time below 14 days and continuing a steadily decline that began in the third quarter of 2014. Private Companies obtained better results than the Administrations: while the former decreased their delays by 0.64 days and registered an average delay of 13.36 days, the latter increased

their delays by 0.67 days and registered an average delay of 24.17 days.

However, the Average Agreed Period's evolution is not so positive. It reaches 78.01 days in the last quarter and increases by 0.14 days with respect to the previous quarter and by 0.03 days with respect to the previous year. The Private Sector's Average Agreed Period increases by 0.15 days since the previous quarter whereas the Administration's Average Agreed Period decreases by 0.20 days. The Private Companies' Average Agreed Period increases by 0.02 days with respect to the previous year. The Administrations' Average Agreed Period increases by 0.49 days with respect to last year. The detailed analysis of the Spanish companies' Average Payment Delay shows that:

- The proportion of prompt payments has increased: 47.52% of the companies pay promptly, which means a 4.01 points increase with respect to the previous year.

- Once again, we can see that there are geographical differences: the northern autonomous regions pay more quickly. Nonetheless, the average payment delay of all autonomous regions represents less than 20 days this quarter.

- The sector that registers the most significant payment delays is the Administrations one, followed by Hotels and Financial Intermediation, while the Industry, Communications and Commerce sectors register the shortest payment periods. With the exception of the Financial Intermediation and Administrations sectors, all sectors decreased their Average Payment Delay with respect to last year.

- Finally, Medium and Small companies have shorter payment delays than Micro and Large businesses. Nonetheless, all segments have reduced their payment times in the last year. Evolution of average delays

EVOLUTION OF AVERAGE DELAYS

During the second quarter of 2016, the Average Payment Period maintained the downward trend of the last two quarters and reached 91.48 days, which is the lowest figure since the second quarter of 2014.

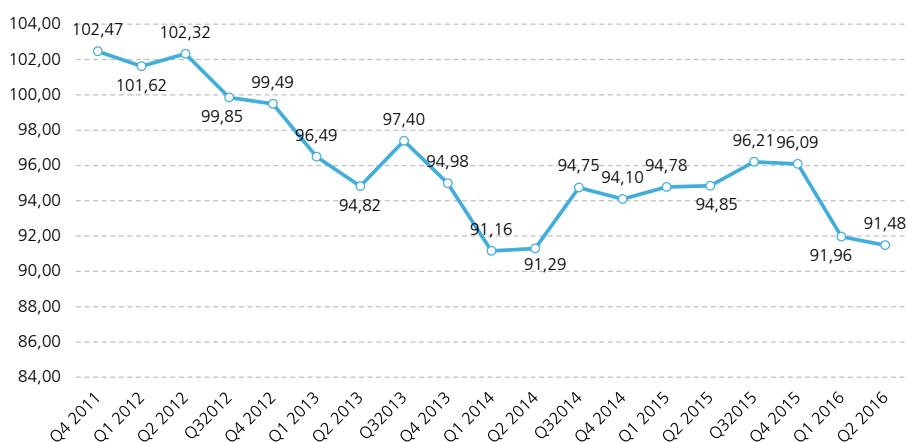

It decreases by 0.48 days with respect to the previous quarter and by 3.37 days with respect to last year.

This decrease is due to the improvement of the Average Payment Delay, which continues to decrease. On the other

hand, the Average Agreed Period slightly increased by 0.14 days. The Average Payment Delay of the second quarter, 13.47 days, is the best figure ever registered since this study was first conducted and is below 14 days for the first time.

	Q2 2015	Q32015	Q4 2015	Q1 2016	Q2 2016
Average payment delay period	16,86	16,35	16,08	14,10	13,47
Average agreed period	77,99	79,85	80,01	77,87	78,01
Payment Average Period	94,85	96,21	96,09	91,96	91,48

PAYMENT AVERAGE EVOLUTION

LEGISLATION

The Member states had had to translate, up to March 16, 2013, the 2011/7/UE Directive that established the measures to combat late payment in commercial transactions. The EU directive 2011/7/UE establishes, as a general norm, a 30 days limit to pay invoices.

The adaptation of the Directive in

Spain has been done through the Royal Decree-Law 4/2013 dated 22 February that included measures to support entrepreneurship and to stimulate growth and job creation.

A standard delay of 30 days is established for Administrations and 60 for companies; a late payment type is established (8 points above the reference value of the ECB) and the possibility of being charged with a penalty of 40 euros.

Administration:

During the second quarter of 2016, the Average Payment Period of the Administrations sector represented 93.94 days; it increased by 0.47 days with respect to the previous quarter and by 2.40 days with respect to the second quarter of 2015.

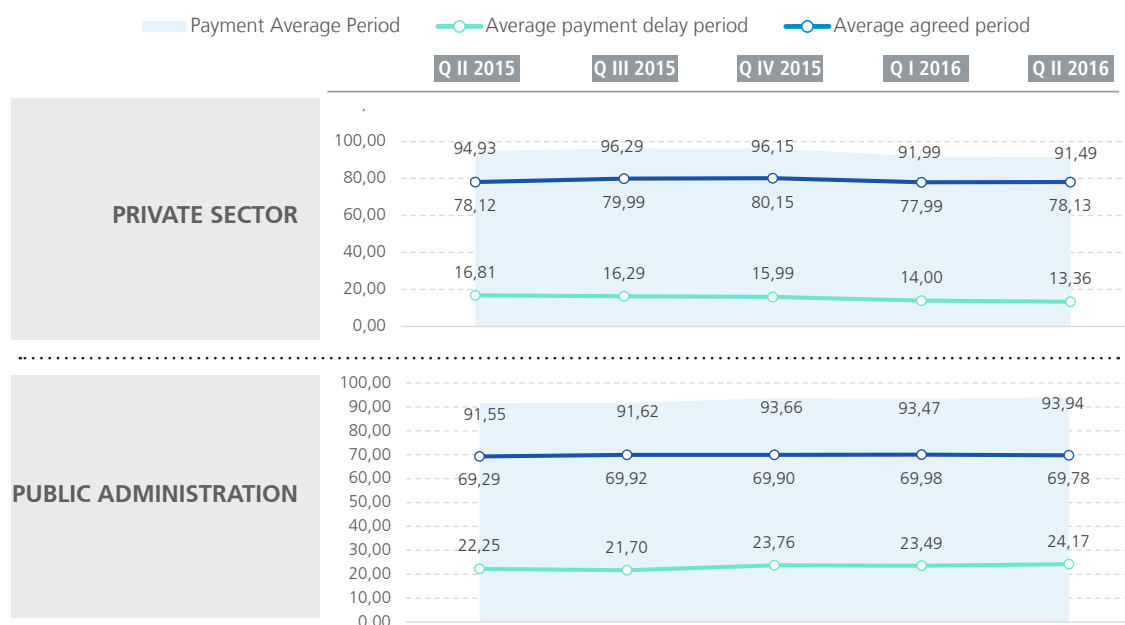

The evolution of the Administration's Average Payment Delay explains this situation: it increases with respect to both the previous quarter (+0.67 days) and the same period last year (+1.91). On the other hand, the Average Agreed Period followed the opposite trend: it

decreased by 0.20 days in the last quarter and increased by 0.49 days in one year.

Private Companies:

In the second quarter of 2016, the Private Companies' Average Payment Delay continued to decline and reached 13.36 days. This figure represents a 0.64 days decrease with respect to the previous quarter and a 3.45 days decrease with respect to the second quarter of 2015. On the other hand, the Average Agreed Period increased by 0.15 days with respect to the first quarter of 2016 and by 0.02 days with respect to the previous year.

METHOD

INFORMA D&B, through its DUN TRADEProgram has formed a unique database formed by more than 1,600,000 payment experiences that correspond to more than 400,000 companies in Spain.

The DUN TRADE Program is unique in the world; for 45 years in USA and 25 in Europe, it has been using accounting

data from thousands of companies and analyses payment delays in comparison with negotiated conditions.

DUN TRADE is a completely free and confidential program that consists in an information interchange between INFORMA D&B's DUN-TRADE database and the participant company on the clients' payment behaviour of the latter.

These payment experiences are constituted by the identification data of the clients and for the transactions carried out each month that include information on pending invoices from the clients: Expired, not collected and pending expiry date.

AVERAGE PAYMENT DELAY

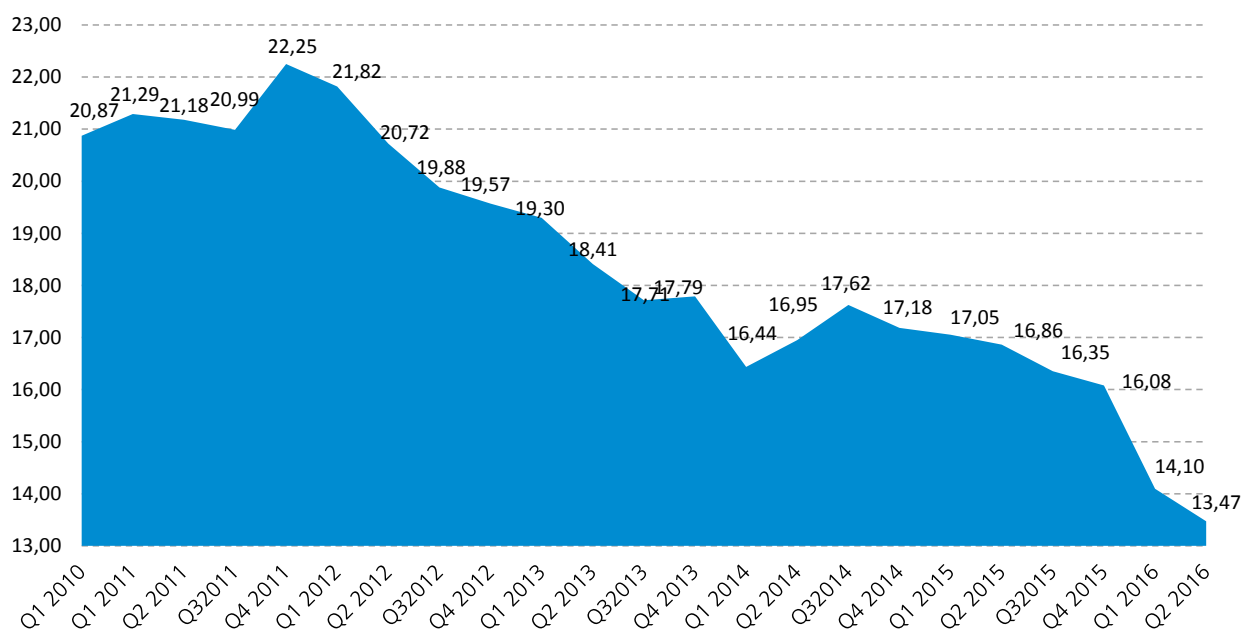

The Average Payment Delay of the second quarter represents 13.47 days, which is the lowest figure ever recorded in this study. This is the first time that the Average Payment Delay represents less than 14 days after seven consecutive months of decrease.

Payment delays cost.

So as to estimate the direct cost that delays of payment mean for all the business network, we have extrapolated the main conclusions of this study to the entire Spanish economy, this would return a default cost of 1,601 million euros.

The DunTrade Database is formed by 1.6 million positive and negative payment experiences, for a total amount superior to 14,000 million €, in which the behaviour of more than 400,000 different companies may be appreciated, this means a unique analysis frame in Spain and a valid reference for the determination of real payment habits.

PAYMENTS AVERAGE EXCEEDED DELAYS EVOLUTION

PAYMENTS DELAYS COST CALCULATION

It is obtained from the amount that represents the business credit in Spain (Recent Evolution of the Business Credit of the non Financial Companies in Spain. Economic Bulletin January 2015).

Thanks to the statistics of the DUN TRADE Program, we could get to know the percentage distribution of payment delays, spreading these percentages to business credit we could know the

amounts of each section and calculate the cost, applying an annual 8.05% interest rate as cost according to the Official State Gazette (BOE) dated 29 December 2015.

PAYMENT BEHAVIOUR DISTRIBUTION

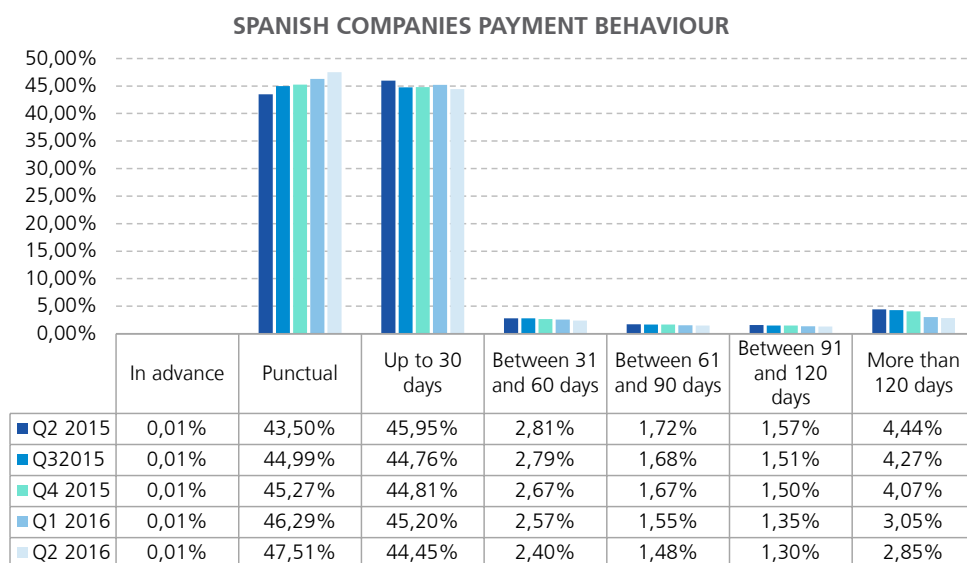

In the second quarter of 2016, prompt payments¹ represent 47.52% of the total, which represents an increase of 1.22 points with respect to the previous quarter and an increase of 4.01 points with regard to last year.

On the other hand, the proportion of invoices paid up to 30 days late decreased

by 0.48 points between the first and second quarter of this year and by 1.49 points with respect to the previous year.

Payments more than 30 days late decrease in the last quarter (-0.48 points) and with respect to last year (-2.52 points).

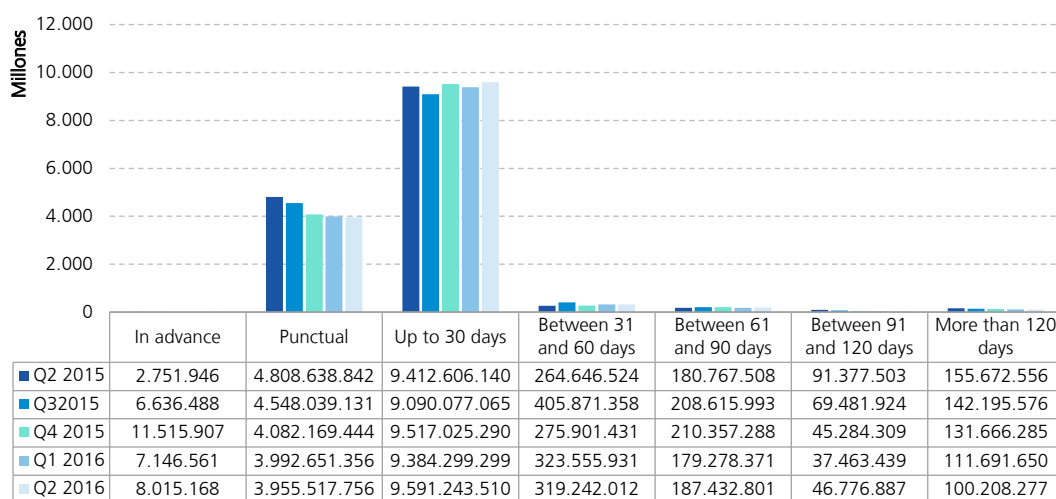

47.52% of the companies pay on time

The total amount of the analysed invoices reaches 14,208,436,411 euros: 27.90% corresponds to prompt payments¹.

67.86% to payments up to 30 days late and 4.60% to payments more than 30 days late.

LATE PAYMENTS AMOUNTS DISTRIBUTION

¹ Including payments in advance.

GEOGRAPHICAL ANALYSIS

As in the previous quarter, all autonomous regions have an Average Payment Delay that is inferior to 20 days.

The autonomous regions with the most significant payment delays are: Canary Islands, with an average delay of 19.22 days; Extremadura, with 17.15 days and Andalusia, with 16.71 days. On the other hand, the autonomous regions with

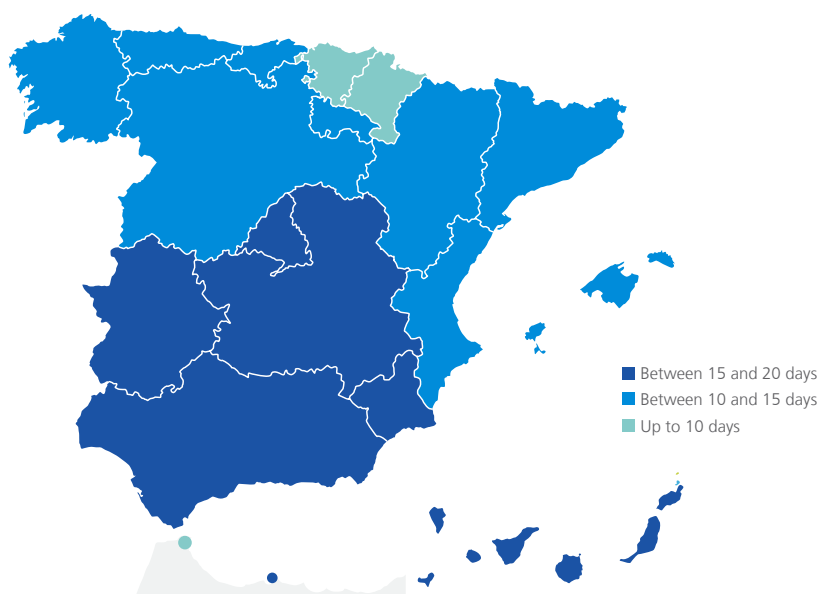

the lowest payment delays are: Basque Country, with 9.06 days; Navarra, with 9.49 days and Aragon, with 9.62 days.

The companies of the Community of Madrid pay with an average delay of 15.55 days, that is to say 2.08 days above the national average, whereas the companies of Catalonia pay with a delay of 12.19

days, that is to say 1.28 days under the Spanish average.

The gap between the Autonomous Region with the highest payment delay and the one with the lowest payment delay shrinks: it represent 10.16 days this quarter, while it represented 10.22 days in the previous quarter.

PAYMENT DAYS DISTRIBUTION BY AUTONOMOUS COMMUNITIES

EVOLUTION FROM THE SECOND QUARTER 2015

All autonomous regions with the exception of Melilla decreased their Average Payment Delay with respect to the first quarter of this year and with respect to 2015.

The most significant decreases with respect to the last quarter were registered

in: Ceuta, with a 1.61 days decrease; Andalusia, with -1.10 days and Murcia, with -1.02 days.

This downward trend can be observed in all autonomous regions since last year. The most significant decreases registered between the second quarter of 2015

and the second quarter of 2016 can be observed in: Andalusia (-5,65 days), Castilla La Mancha (-5,46 days) and Murcia (-5,04 days).

EVOLUTION OF PAYMENT BEHAVIOUR BY AUTONOMOUS COMMUNITIES

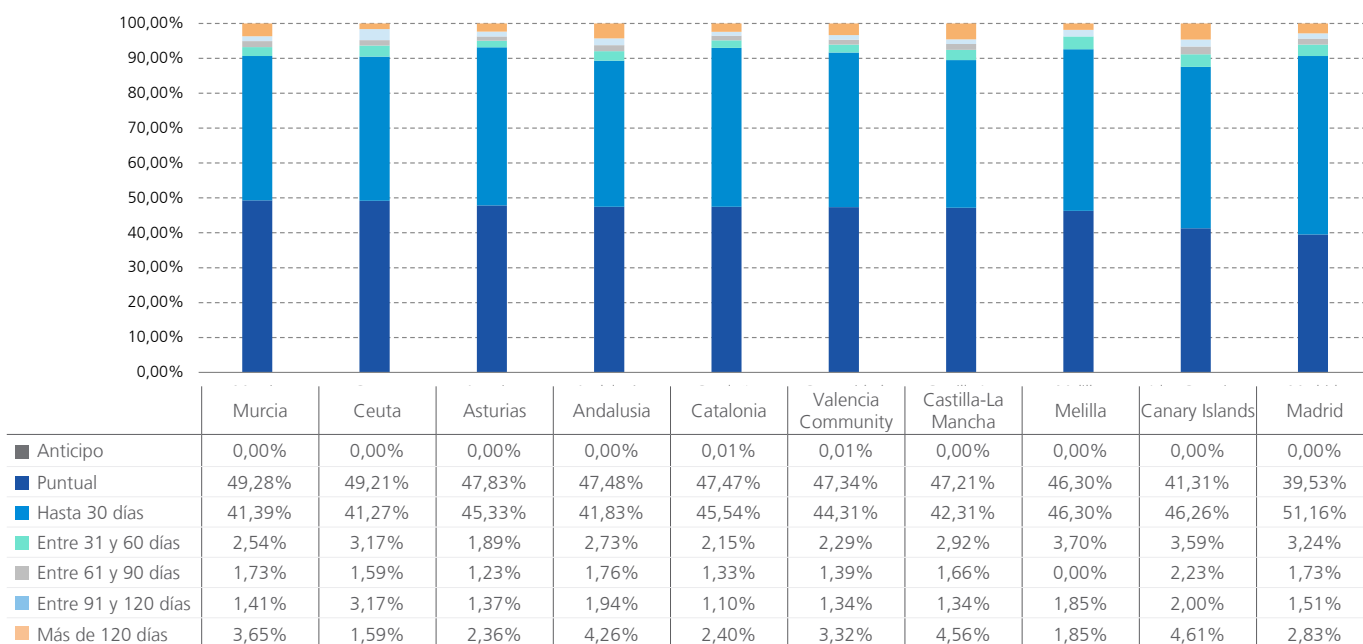

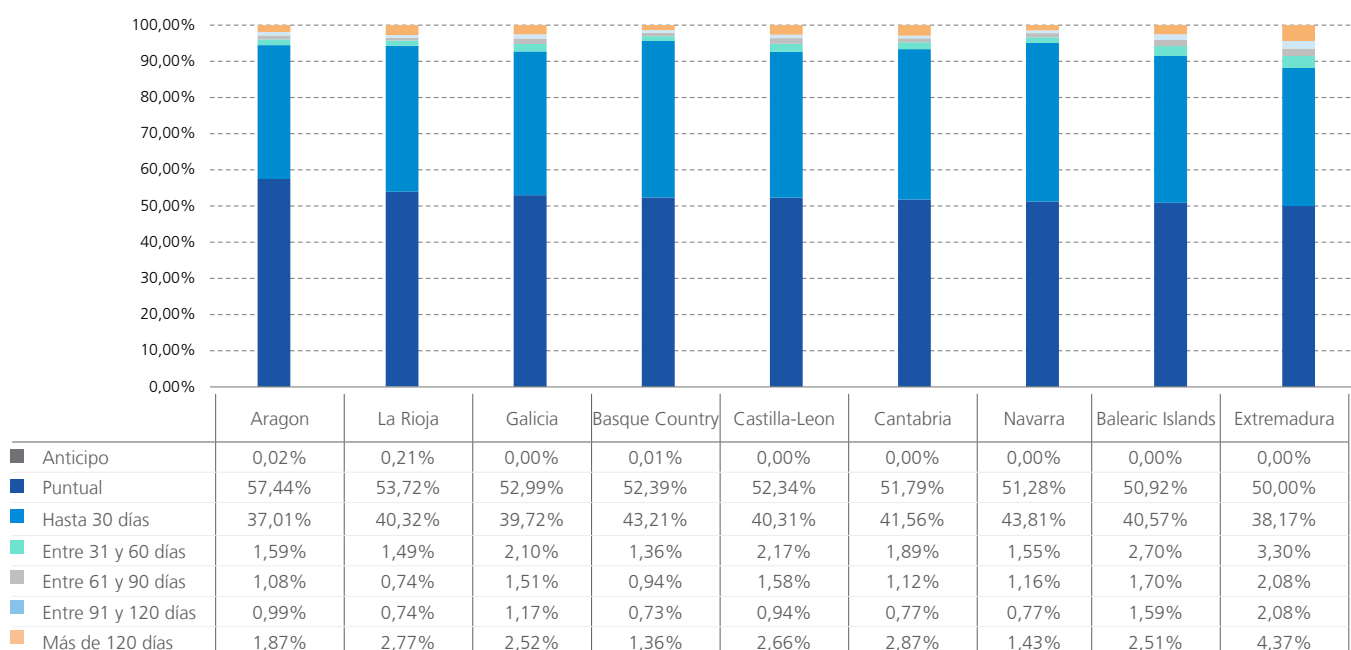

If we analyse the payment behaviour by autonomous regions we can see that nine autonomous regions pay more than 50% of their payments promptly: Aragón, with 57.44%; La Rioja, with 53.73%; Galicia, with 52.99%; Basque Country, with 52.39%; Castilla y León, with 52.34%;

Cantabria, with 51.79%; Navarra, with 51.28%; Baleares, with 50.92% and Extremadura with 50%.

On the contrary, the Autonomous Regions with the highest percentage of payments with a delay exceeding 60 days are:

Canary Islands, with 8.84%; Extremadura, with 8.53% and Andalusia with 7.96%, being the national average 5.63% this quarter.

STRETCHES OF PAYMENT BEHAVIOUR BY AUTONOMOUS COMMUNITIES

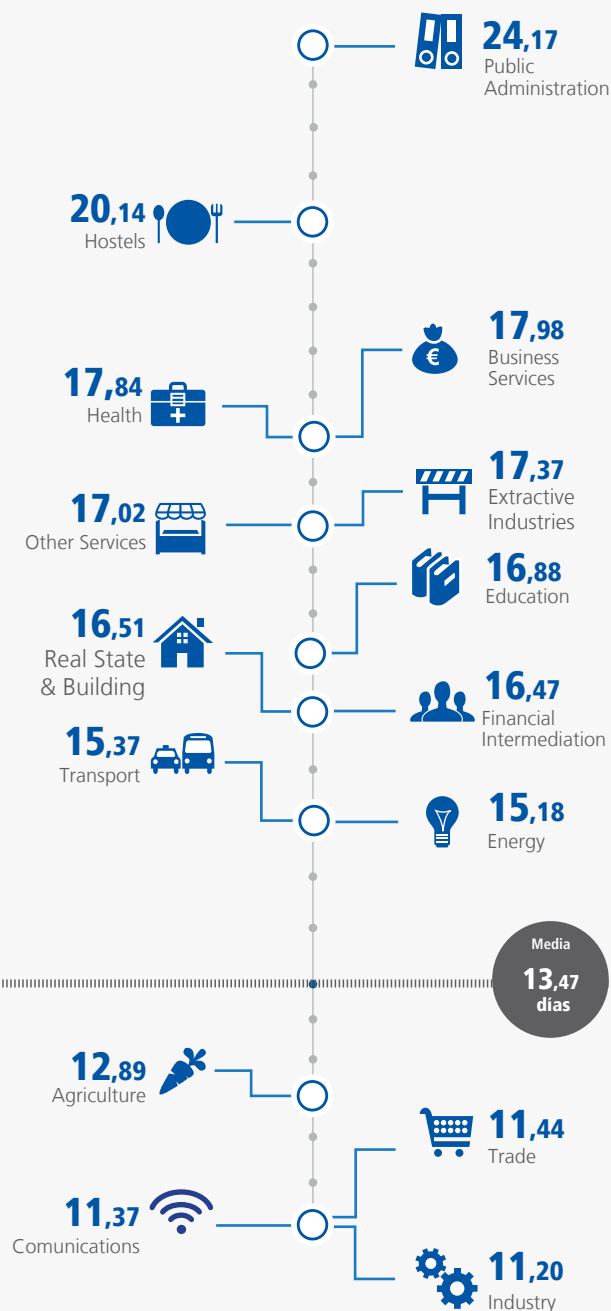

SECTORIAL ANALYSIS

The Administrations sector registers the most significant Average Payment Delay during the second quarter, with an average of 24.17 delay days, followed by Hotels and Financial Intermediation, with 20.14 days and 17.98 days respectively.

This quarter, the best paying sectors are: Industry (11.20 delay days) Communications (11.37 days) and Commerce (11.44 days).

Depending on whether an Industry or Administrations business is contracted, the payment delay varies in 12.97 days. Last quarter, this gap represented 12.06 days.

PAYMENT BEHAVIOUR BY SECTOR. SECOND QUARTER OF 2016

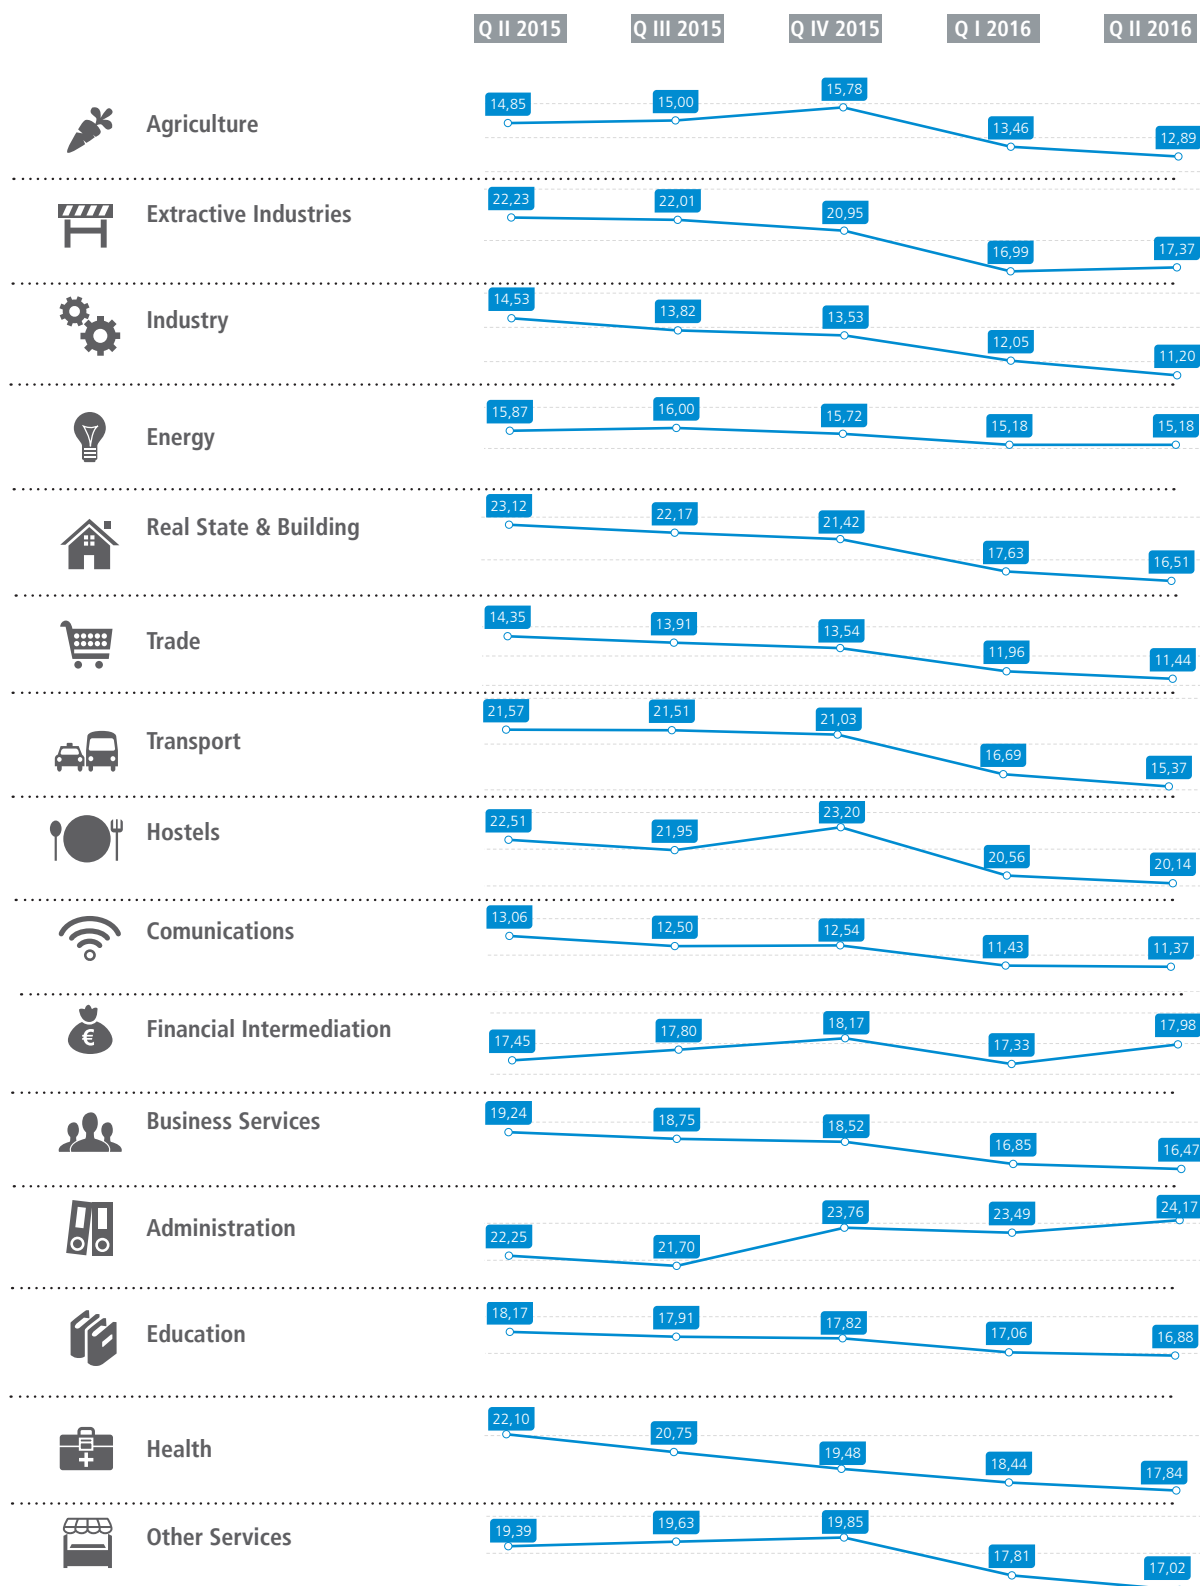

EVOLUTION SINCE THE FIRST QUARTER OF 2015

We can observe that most sectors of the economy decreased their Average Payment Delay with respect to the last quarter. The most significant decreases concern the following sectors: Construction (-1.12 days), Transports (-1.32 days) and Industry (-0,85 days). On the other hand, the sectors that increased their Average Payment

Delay are: Administrations (+0.67 days); Financial intermediation (+0.64 days) and Extractive Industries (+0.38 days).

In the last year, all sectors decreased their average payment delay except for Administrations, which increases it by 1.91 days, and Financial Intermediation,

which increases it by 0.52 days. The sectors that registered the most significant declines were: Construction and Real Estate Activities (-6.61 days), Transports (-6.20 days) and Extractive Industries (-4.86 days).

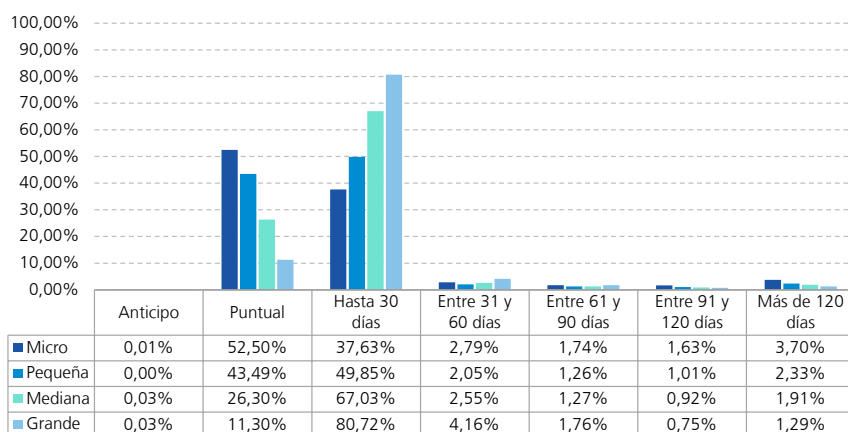

ANALYSIS PER COMPANY SIZES²

In the second quarter of the year we can see that Micro and Small businesses pay on time in 53.70% and 44.90% of the cases respectively. This figure decreases as the size of the companies increases: Medium companies pay on time in 27.18% of the

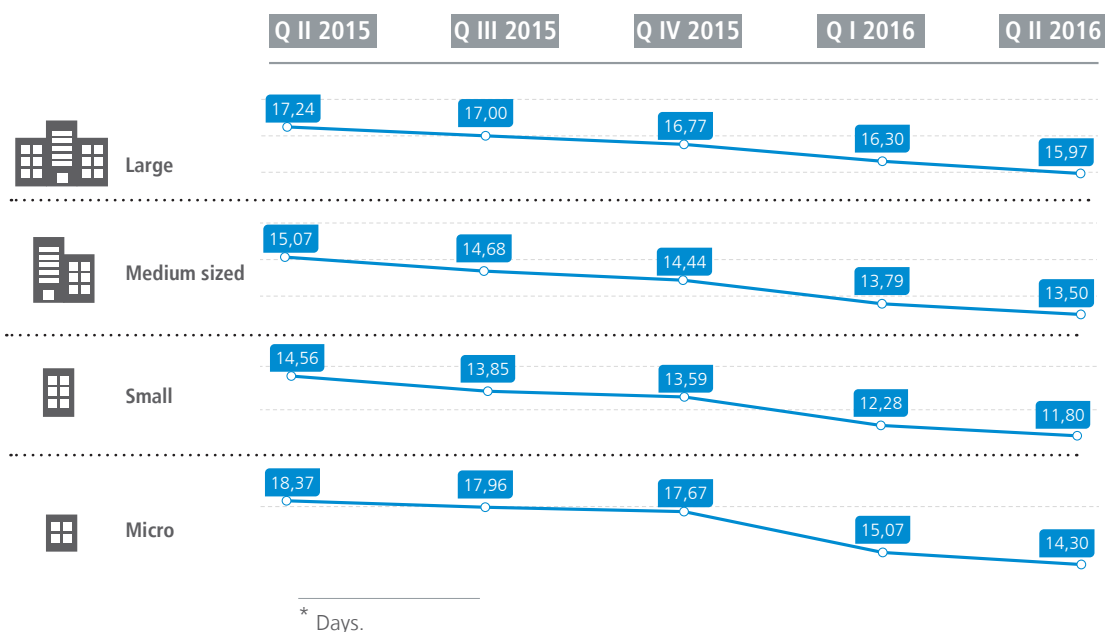

cases and the Large ones do it in 11.95% of the cases.

PAYMENT BEHAVIOUR DEPENDING ON THE SIZE OF THE COMPANY

² So as to define the sizes of the businesses we do continue the recommendation 2003/361 of the European Community taking only into account the employees number: Micro: <10 employees; Small: <50 employees, Medium: <250; Large: >= 250 employees.

EVOLUTION SINCE THE FIRST QUARTER OF 2015

The downward trend concerns companies of all sizes. The average payment period of Micro businesses has decreased by 4.08 days since the second quarter of 2015. Small businesses decreased it by 2.76 days, Medium companies by 1.57 days and Large companies by 1.27 days.

During the second quarter of 2016, Large companies registered the most significant Average Payment Delay (15.97 days), followed by Micro companies (14.30 days), Medium businesses (13.50) and Small companies (11.80).

This study has been carried out by the Studies Department of INFORMA D&B. The data come from INFORMA' D&Bs database.

ABOUT INFORMA.D&B

INFORMA is the leader company in Business, Financial and Marketing Information, with a consolidated sales volume of 91,8 millions € in 2015. It was the first financial and business information Spanish database in obtaining the AENOR Quality certificate, having currently this certification according to the ISO 9001 and 14001 regulation.

Since its inception in 1992, the database Informa has been fed from multiple public and private information sources, as the Borme (Official Gazette of the Mercantile Register), Official Filed Accounts, BOE (Official State Gazette), Provincial and autonomous regions Official Gazettes, National and Regional Press, ad hoc Investigations and Several Publications.

INFORMA's national database contains:

- 6.7 million national economic agents.
- 3.5 millions active companies and sole proprietorships with rating.
- More than 13.2 million companies' balance sheets.
- More than 14 million administration positions.
- More than 2.5 million companies with corporate links.
- More than 150,000 data updated on a daily basis

The leadership of INFORMA reinforces in 2004 after absorbing the business in Spain and Portugal of the multinational Dun&Bradstreet. Since that moment it forms part of the greatest business information network of the world: the Worldwide Network, and as such it offers on-line access to the information on 250 million companies all throughout the world.

Currently INFORMA has more than 130,000 clients and 3,000,000 users (between the brands Informa, elinforma and DBK), and with the confidence of more than 95% of the financial entities and 89% of the IBEX35 companies to take their risk decisions.
